In September 2005 KCGM released the Seepage and Groundwater Management Plan (SGMP) to oversee the planning and management activities associated with controlling groundwater around the Fimiston I and Fimiston II TSFs.

The primary focus of the SGMP is groundwater level management around the TSFs to protect vegetation. This requires the depth to groundwater to be maintained sufficiently deep so as not to impact on the soils or roots from which plants source water.

KCGM is required to engage a suitable qualified professional to conduct and audit of the SGMP. This audit will include a review of the progress towards targets and milestones and if plan objectives are still appropriate and being achieved. The findings from this audit and public feedback received will be used to determine if the current SGMP requires revision.

The following report presents the findings of the SGMP Annual Audit and is available for public comment. We encourage the community to take an interest and provide feedback regarding this report.

We would appreciate your feedback by Monday 25 August 2008.
